Ricardo :

Please see the response from Allen .   Thanks

Sue

Sue,

I've attached a spreadsheet with the CCA data separated by box. The boxes are indicated by letter, with box A being the first box (brood), box B being the first honey super and box C being the second honey super.

For CCAs 1-7 there was a queen excluder above box A. Therefore there is only capped, open, and egg data for box A. After CCA7, the queen excluder was moved to just below the feeder. Therefore there is data for all matrices for CCA8 and CCA9.

Allen

Subject: Clothianidin Colony Feeding Study Question

Sue,

I've got another request from our assessors related to the feedings study.

Could you provide any data for each of the endpoints by hive body? As in, at CCAs where there is a regular hive body plus at least one super, the relevant endpoint data (i.e. adults, honey, pollen) segregated by which hive body they are in.

Thanks.
